

MS DryCare Plus

For optimal housing hygiene

MS Schippers

Passion for Farming

Hygiene in livestock housing is essential to minimize environmental bacteria. Poor hygiene contributes to health problems among animals.

A powerful moisture absorbing disinfectant powder contributes to optimum health.

Proper housing hygiene helps to ensure good teat condition, udder health and an optimal living environment.

Dry pens contribute to a healthy environment for calves.

A dry and pathogen free pen ensures that piglets get warm quickly and healthy.

Scattering the powder in laying nests ensures dry conditions and a healthy climate in the house.

Important aspects of a hygiene powder:

- Moisture absorption – the most important aim of a hygiene powder is to create a dry living environment, so that microorganisms have no chance to develop
- Good distribution – the product must be easy to spread, so that it covers the area well, and does not create dust
- An attractive smell – plays a role in a pleasant living environment and it can smother or neutralise unpleasant smells
- pH – a hygiene powder must not cause irritation to an animal's teats, skin, hooves or legs
- Disinfectant – the instant disinfectant power with color detector ensures a pathogen free environment.

MS DryCare Plus

MS DryCare Plus is a hygiene powder for the livestock buildings and their surroundings with extra disinfection capacity for a dry and pleasant climate.

Extra benefits of MS DryCare Plus:

- Completely natural product with a optimal absorbency.
- Premixed with MS Kiemkill: a powdered, oxidizing disinfectant based on peroxymonosulfate, with a quick action at low concentrations and broad microbiocidal spectrum.
- Becomes active when it gets in contact with moisture and gives a red colour, which reflects the disinfectant action
- An ideal mix in case of higher risks for general animal health
- Fly repellent

**Very high
moisture
absorption,
>200%**

**Does not
create dust**

**The product is
pH neutral**

**Powerfull
disinfectant**

Using MS DryCare Plus leads to:

- A dry living environment
- Reduced pathogen pressure
- Improved animal health and comfort
